We excluded the study of Elit et al. Ferlay, J.

ConclusionThe relatively slow progress in improving the outcomes of EOC patients

With almost 14, deaths expected in epithelial ovarian cancer EOC remains the most lethal gynecologic malignancy. Epithelial ovarian cancer has been shown to manifest a persistent pro-oxidant state as evident by the upregulation of several key oxidant enzymes in EOC tissues and cells.

SBRT implies a high-dose per fraction and is delivered in 2–5 fractions. Assh based identification of CSCs More recent approaches for studying the role of stemness in EOC are based on the identification of putative stem cell markers in EOC and the validation that these markers identify a subpopulation of cells with enhanced tumorigenic potential.
